Expected Outcomes: Research Techniques

Demonstrate higher level of subject matter knowledge than the BS in chosen area of concentration and ability to perform general lab and field techniques relative to horticulture

Assessment methods

Method: Discussion

Faculty discussion to determine if even at the M.Ag. level are students being properly educated on research techniques in horticulture.

Findings:

In addition to individual research program, students should expand their knowledge through graduate level coursework in horticulture.

How did you use findings for improvement?

Offer two graduate level horticulture classes that have application in research techniques regardless of area of specialization in horticulture.
