Expected Outcomes: Acquire basic knowledge of related disciplines

Students will be able to understand the disciplines that contribute knowledge in the real estate development project delivery process. Students will understand the distinctions and possibilities for collaborations and innovations among design, construction, finance, and management disciplines.

Assessment methods

**Method:** Acquire Basic Knowledge of Related disciplines

Individual projects, group projects, mid-term and final exams and case study reflection papers will be used to assess the acquisition of basic knowledge of real estate development. The curriculum has a terminal exam in the form of a Capstone Studio which asks students to integrate the knowledge learned in previous classes in the curriculum.

**Findings:**

The first class graduated in May 2012. We have found that the foundational courses and the field trip courses have provided students with the opportunities to view all of the disciplines involved in the development project delivery process.

**How did you use findings for improvement?**

We have continued to involve industry leaders in the delivery of the MRED curriculum.

**Additional comments:**

None

Expected Outcomes: Acquire Digital Skills

Students will be capable of using digital media programs for real estate development: Argus, Excel, Site-to-do-Business, and PowerPoint.

Assessment methods

**Method:** Acquire Digital Skills

Project, Mid-Term, and Final Exams Assessments of this outcome will be very evident in the execution of individual projects, group projects, exams, and case study discussions and papers. Special workshops for each digital program are introduced in the curriculum prior to their use in their courses. Exams for each workshop assess the student’s progress.

**Findings:**

Technology workshops need longer contact time to make them more effective.

**How did you use findings for improvement?**

We have added an additional day to the Excel Workshop.

**Additional comments:**

None
