Expected Outcomes: Knowledge and skills

Students will demonstrate knowledge, skills, and abilities needed to work in an entry level position in the field of rehabilitation and disabilities or needed to seek graduate education in the field of rehabilitation and disabilities.

Related typical general education outcomes:

1. Information Literacy
6. Ability to Solve Open-Ended Problems
10. Intercultural Knowledge and Diversity Awareness

Assessment methods

Method: Knowledge and skills

Students develop competency in knowledge domains pertaining to a biopsychosocial view of rehabilitation and disabilities including: biological (assessment, medical aspects, rehab. technology); psychosocial (independent living, psychosocial aspects); social (occupational info., placement services)

Findings:

Student grades for all courses (domains) are reviewed to determine the extent to which course objectives are met. Student evaluations for all courses (domains) are reviewed to determine the extent to which course objectives are met. Peer evaluations for all courses (domains) are reviewed to determine the extent to which course objectives are met.

How did you use findings for improvement?

The results of grades, student course evaluations, and faculty peer evaluations are used to determine recency of information and comprehensiveness of information are reviewed by program faculty to update, modify, or develop new curricular materials as appropriate.

Additional comments:

Vocational Evaluation, a course in assessment methods specific to vocational knowledge, skills, abilities, and competencies has been removed from the curriculum until the content has been undated to reflect current field practices to include on the job try-outs, environmental assessments, and behavioral assessments.

Expected Outcomes: Practica and internship

Students will participate in practica and internship activities needed to work in an entry level position in the field of rehabilitation and disabilities or needed to seek graduate education in the field of rehabilitation and disabilities.
Related typical general education outcomes:

6  Ability to Solve Open-Ended Problems
7  Written Communication
8  Oral Communication

Assessment methods

Method: Practica and internship

Students will participate in 4 practica activities (consisting of a minimum of 60 client contact hours for each) and one internship (consisting of 600 client contact hours)

Findings:

Student grades for practica and internship are reviewed to determine the extent to which course objectives are met. Student evaluations for practica and internship are reviewed to determine the extent to which course objectives are met. Peer evaluations for all courses are reviewed to determine the extent to which course objectives are met.

How did you use findings for improvement?

The results of grades, student course evaluations, and faculty peer evaluations are used to determine the noted skill levels for students in clinical experiences and are reviewed by program faculty to update, modify, or develop new curricular materials as appropriate.
